

CentralLogic

Orchestrate. Navigate. Elevate.

Central Logic was founded on the belief that health system growth and success depend on delivering patients safe, quick, and efficient access to the right care at the right location without delay. Throughout our fifteen-year tenure, we've focused on enabling success in the transfer center and on supporting access to a full spectrum of services for all constituents of a hospital or health system, regardless of whether the patients have chronic conditions, one-time ailments, or are healthy individuals who want to keep it that way.

At Central Logic, we know that providing "access" is, as its essence, all about **making it easier for patients and providers to work with you**, and our experience enabling more than 10 million transfers has taught us that if we can help you achieve your access goals, your organization will achieve its business goals and your patients will thrive.

Central Logic provides an access solution that comprises not only software but also a surrounding ecosystem of resources that are purpose-built to provide system-wide access to care, allowing you to acquire and retain more patients, improve patient outcomes, and increase operational effectiveness. Our core pillars include:

- Real-time analytics
- Maximization of clinical productivity
- Integrated on-call scheduling
- Intelligent, advanced transport coordination
- Open integrations
- And a secure, robust, cloud-based architecture

Central Logic combines software with clinical best practices, process improvement engagements, and actionable intelligence to deliver proven and measurable results across your hospital or health system. Our holistic solution includes a complete consulting engagement by our team of clinicians –

experts in transfer center operational processes – at no extra charge. And we deliver contractually guaranteed financial, operational, and clinical ROI.

Good Enough is Not Good Enough

Many hospitals and health systems rely on their EMR vendor, spreadsheets, and sometimes even old fashioned paper to manage patient transfers. With these tools, they often manage to coordinate individual transfers but do little to provide true patient access, let alone effectively load balance across facilities, understand where and why transfer requests and denials are occurring, or create marketing strategies that bring patients in for the long haul.

Without a holistic, integrated approach to transfer and access services that connects and enables tools, teams, data, and process and delivers best practices on everything from physician alignment to culture to telephony design and space layout, health systems will be stuck with only a stop-gap and not a true access solution that will improve clinical outcomes, increase the number of net new patients, decrease leakage, and drive up revenue. Instead, they'll experience avoidable errors and delays, will waste time manually pulling together relevant data from disparate systems in an attempt to gain insights, and their clinical staff will waste time on administrative tasks instead of working at the top of their licenses.

Your patients deserve more than "good enough," and so does your healthcare system.

Central Logic Access Solution is purpose-built to help health systems achieve integrated, automated patient access and transfers in real time. It provides a vital, strategic capability to achieve growth, improve patient outcomes, and increase operational effectiveness - today and into the future.

Everything You Need to Get Patients the Right Care in the Right Location Without Delay

The Central Logic Access Solution includes everything you need to ensure that patients get the best care possible as soon as possible. Included components:

 <p>Transfers</p> <p>Centralized enablement, management, and automation of all aspects of patient transfers, whether into, out of, or through your health system.</p>	 <p>Bed Visibility</p> <p>System-wide, vendor-agnostic visibility to capacity & bed management.</p>	 <p>On-Call Scheduling</p> <p>Integrated and centralized physician and provider scheduling and calendar data that is visible to entire health system in real time.</p>	 <p>Transport</p> <p>Automated emergent and non-emergent transport requests with real-time tracking and geo-fencing.</p>	 <p>Analytics</p> <p>Real-time, dynamic, interactive dashboards that provide clear visibility into every facet of your health system operations so you can understand at a glance how you're meeting access and transfer center objectives.</p>
