

CentralLogic

Healthcare Access & Orchestration

About Us

Central Logic was founded on the belief that health system growth and success depends on delivering patients safe, quick, and efficient access to the right care at the right location without delay. Central Logic is dedicated to orchestrating, navigating, and elevating the flow of patients through the entire continuum of care, regardless of whether the patients have chronic conditions, one-time ailments, or are healthy individuals who want to keep it that way.

At Central Logic, we know that providing access all comes down to **making it easier for patients and providers to work with your health system**. Our experience orchestrating more than 10 million transfers has taught us that if we can help you achieve your access goals, your organization will achieve its business goals and your patients will thrive.

About Our Platform & Architecture

Central Logic was built from the ground up on a single, cloud-based software platform that enables health systems to implement our enterprise-class solution at a fraction of the time, cost, and hassle associated with internally-hosted applications. Central Logic offers industry-leading healthcare access and orchestration capabilities healthcare organizations need, without requiring any additional headcount or the burden of implementing and maintaining internal systems and databases. As health systems search for increased accessibility, scalability, and flexibility in their IT resources, Central Logic makes digital infrastructure and capabilities available in an instant and without a massive capital investment.

Built for the Cloud

- Built on a single cloud-based platform with common administration and security and no need for more than one user manual or training
- Hosted on Microsoft Azure, a leading public cloud computing provider in healthcare, ensuring the highest levels of availability, scalability, and security for our clients
- Multi-tenanted architecture means that only you have access to your data
- Integrates seamlessly with health IT infrastructure already running Microsoft products, as well as your existing electronic health records (EHR) systems
- Supports live streaming of HL7 data feeds

Fast Path to ROI

- No costly hardware or infrastructure investments
- Minimize resources and time spent on installation, maintenance, and ongoing support
- New features and fixes delivered on rolling basis, with no IT involvement required

Reliable

- Guaranteed to be up and running at least 99.5% of the time
- Little to no downtime for upgrades
- Daily data backups & HIPAA-compliant retention
- Proactively monitored environment at 3 levels – facility infrastructure, HIT infrastructure, and application
- Load-balancing hardware for high volume workloads
- Service recoverability in the event of disaster

Secure

- Extensive industry-recognized security certifications and audits; including HIPAA/HITECH, FedRAMP, SOC 1 (formerly referred to as SAS 70 and/or SSAE 16) and SOC 2 audit trails and logs, ISO 9001, ISO 27001, HIPAA Business Associate Agreement (BAA)
- Regular penetration testing
- Restricted security infrastructure that limits access to only those who need, when they need it
- Network infrastructure, hardware & firmware, testing & monitoring secured by 3,500 Microsoft cybersecurity experts working 24 x 7 x 365
